

Scores

| Criteria     | Score / 20 |
|--------------|------------|
| Completeness | 19         |
| Accuracy     | 18.5       |
| Clarity      | 18         |
| Structure    | 17.5       |

Strengths

- The student work correctly identifies the interpolation polynomial  $P$  for the given points.
- The student provides a clear and concise justification for their answer.
- The student demonstrates a good understanding of the Lagrange interpolation method.

Weaknesses

- The student could have provided more detailed calculations for some of the steps.
- The student could have used more descriptive variable names in their calculations.

Missing Requirements

- The student did not fully address the last part of Exercise 3.

Final Feedback

The student demonstrates a good understanding of the interpolation polynomial concepts and provides a clear and concise solution. However, the student could have provided more detailed calculations and used more descriptive variable names. Additionally, the student did not fully address the last part of Exercise 3.
