

Scores

Criteria	Score / 20
Completeness	18
Accuracy	19
Clarity	18
Structure	17

Strengths

- The student work correctly identifies the interpolation polynomial P for the given points.
- The student work provides a clear and concise justification for the chosen polynomial.
- The student work demonstrates a good understanding of the Lagrange interpolation method.

Weaknesses

- The student work could benefit from more detailed explanations and derivations.
- Some of the calculations are not explicitly shown, making it difficult to follow the student's reasoning.

Missing Requirements

- The student work does not fully address all parts of the problem, specifically Exercise 4 (3) and (4).

Final Feedback

The student demonstrates a good understanding of interpolation polynomials and the Lagrange method, but could improve by providing more detailed explanations and calculations. Additionally, the student should ensure that all parts of the problem are fully addressed.
